

## 2022 Breast Cancer Statistics

*If you're interested in sharing breast cancer stats externally, please consult with NBCF for proper citation.*

- 1 in 8 women will be diagnosed with breast cancer in her lifetime. (*cancer.org*)
- In 2022, an estimated 287,500 new cases of invasive breast cancer will be diagnosed in women in the U.S. as well as 51,400 new cases of non-invasive (in situ) breast cancer. (*cancer.org*)
- 65% of breast cancer cases are diagnosed at a localized stage, for which the 5-year relative survival rate is 99%. (*cancer.net*)
- If the cancer has spread to the regional lymph nodes, the 5-year survival rate is 86% and if the cancer has spread to a distant part of the body, the 5-year survival rate is 29%. (*cancer.net*)
- At the time of diagnosis, approximately 65% of breast cancer patients have local-stage breast cancer, 27% have regional stage, and 6% have distant (metastatic) disease. (*cancer.net*)
- Breast cancer is the most common cancer in American women, except for skin cancers. It is estimated that in this year, approximately 30% of all new women cancer diagnoses will be breast cancer. (*breastcancer.org*)
- This year, an estimated 43,550 women will die from breast cancer in the U.S. (*cancer.org*)
- For women in the U.S., breast cancer deaths are higher than those for any another cancer, besides lung cancer. (*breastcancer.org*)
- In 2022, an estimated 2,710 men will be diagnosed with breast cancer this year in the U.S. and 530 men will die from breast cancer. (*cancer.net*)
- There are over 3.8 million breast cancer survivors in the United States. (*cancer.org*)
- The National Cancer Institute (NCI) states that almost 10,000 excess deaths in the US from breast and colorectal cancer alone over the next 10 years will be because of pandemic-related delays in cancer screening and treatment.
